DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gowan (U.S. Patent Number 5,343,712) in view of Brimer et al. (U.S. Patent Number 4,784,212).

In regard to claims 1-6 and 9, Gowan discloses a temperature controller for facilitating the storage of wine. Referring now to Figs. 1 and 2, a temperature controller 10 for converting a refrigeration unit 12 of the type including an electrically powered chiller 14, a chilled compartment 16, user actuated temperature selecting means, temperature display means 30 and a thermostat 18 for controlling operation of the chiller 14. During the cooling intervals, the temperature of the chilled compartment is lowered to the user-selected temperature in stages. Fig.3 illustrates the sensed temperature of a chilled compartment 16 versus time. However, Gowan does not disclose prescribed course. Brimer et al. disclose prescribed constant rate in the same field of endeavor for the purpose of adjusting temperature stepwise. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the apparatus of Gowan with a prescribed constant rate in view of Brimer et al. so as to adjust temperature in stages.

In regard to claims 7 and 8, it is not patentable, however, to discover the optimum of workable ranges of the cooling rate by routine experimentation. *In re Aller*, 220 F.2d 454, 456,

Art Unit: 3744

105 USPQ 233, 235 (CCPA 1955), MPEP Section 2144.05(IIA). Also, Gowan discloses the sensed temperature of the chilled compartment versus time and the cooling rate is about 0.7 K/h.
